

# Create Command Module Board

## I11-3439529

### \$5.99

The Command Module Breakout Board is a small board that can be used to easily connect electronics or wires to your iRobot Command Module. It contains nine screw terminals corresponding to the nine pins of the connector, including terminals for VPWR and +5 V / GND.

The Breakout Board fits into one of the 4 expansion ports found on the Command Module and provides screw-down terminals to affix wires and sensors without soldering.
