

USB Radio Telemetry Module R226-RF04-900 \$201.00

The Devantech RF04 is a very easy to use radio telemetry module set. The main module is powered from the USB bus, so it needs no external power supply or batteries. Just plug it into your PC and it will appear as a virtual serial port.

The RF04-900 uses the LPRS EasyRadio ER900TRS transceiver for EU (868-870MHz) or USA (902-920MHz) markets. Power output up to 10mW. See the LPRS Easy Radio documentation for pin descriptions.

NOTE restrictions in USA to 1mW and 5mW EU.

Drivers may be necessary to be installed and are available through the Product Resources.

Pinout					
1	Antenna	4	Busy Out	7	Host Ready In
2	RF GND	5	Serial Out	8	Vcc (+2.5 V to +5.5 V)
3	RSSI	6	Serial In	9	GND
