

# GM2, GM3 Wheel Watcher Spacer R266-CS-100 \$1.75

Codewheel mounting system for WheelWatcher CW-32 codewheel stickers. It allows you to use the WW-12 with Solarbotics GM-2 or GM-3 motors which have longer motor shafts than the GM-8 and GM-9.

Made of laser cut acrylic with a self-adhesive backing, the CS-100 fits perfectly on standard injection molded wheels. The CS-100 is used with the WheelWatcher WW-02 when installed on Solarbotics GM-2 or GM-3 motors as a shim to lower the height of the codewheel sticker with regard to the WW-02 sensors. This is necessary to accommodate the longer GM-2 and GM-3 motor shafts.

## Features:

- Self-adhesive backing for easy mounting
- Same size as the CW-32 Codewheel Sticker incremental codewheels used with all WheelWatcher products
