

Devantech USBRLY02 R341-USBRLY02 \$57.50

The USB-RLY02 provides two SPCO (Single Pole Change Over) volt free contact relay outputs with a current rating of up to 16 A. Device power comes from the USB connection and does not require any additional sources. The normally open, normally closed and common relay pins are all available on the screw terminals.

The USB-RLY02 module uses the Microchip PIC24FJ32GB002 to handle all the USB protocols. Before using the USB-RLY02, you will need to download the Devantech inf files and unzip them into a temporary folder. Installation instructions are available at Devantech technical documentation page. The USB-RLY02 will show up on a Apple computer as a virtual serial port without the need to install any drivers.
